

RUEVEN MARC D. ROMAN

Software Developer | Backend Systems, Data Validation & QA

ruevenrmn@gmail.com | +63 976 171 1692 | [linkedin.com/in/ruevenrmn](https://www.linkedin.com/in/ruevenrmn) | github.com/Gustavo-xyz

PROFESSIONAL SUMMARY

Software developer with internship experience building backend systems, reporting interfaces, data-validation workflows, and QA checks. Built three connected service-management systems for requestors, technicians, and service-desk users, and consolidated their data into one central MySQL database. Also supported migration from legacy PHP and Angular features to React. Experienced with Python, PHP, Flask, REST APIs, SQL, MySQL, React, debugging, API validation, and end-to-end testing.

TECHNICAL SKILLS

Programming: Python, PHP, JavaScript, TypeScript, SQL, HTML, CSS

Frontend: React, Angular

Backend and APIs: Flask, PHP, REST APIs, JSON, VirusTotal API

AI and security: NLP, Rasa, LLaMA 3.3, phishing detection

Data and databases: MySQL, SQLyog, Firebase, Firestore, Supabase, Power Query, data validation, database reconciliation, reporting

QA and troubleshooting: scenario testing, API and database validation, UI issue investigation, structured debugging

Tools and libraries: Git, GitHub, browser developer tools, web3.js

EXPERIENCE

Brightideas Information Technology Corporation | Makati City, Philippines

Full-Stack Developer Intern, Reporting and Data Validation | Apr 2026 - Jul 2026

- Built React and TypeScript reporting interfaces with multi-criteria filters, structured tables, count and percentage summaries, and XLSX export workflows.
- Worked with legacy PHP, Angular, and JavaScript systems while continuing the migration from PHP and Angular to React.
- Validated reports using Power Query and SQLyog across multiple school databases and real school data, reconciling counts, percentages, filters, and exports with API responses, database records, and legacy system behavior.
- Tested data and filter scenarios, investigated display issues using browser developer tools, and delivered fixes through GitHub pull requests and reviews.

Simplevia Technologies Inc. | Remote

Backend Developer Intern, Service Management Systems | Jan 2026 - Mar 2026

- Built three connected service-management systems - Requestor, Technician, and Service Desk - using Python, Flask REST APIs, and MySQL.
- Consolidated data from the three systems into one central MySQL database to maintain consistent records across requestor, technician, and service-desk workflows.
- Tested end-to-end data flow across all three systems by comparing API responses and database records, then investigated and debugged inconsistencies.

PROJECTS

Wallet Tracker

Blockchain Monitoring and Discord Alerts | 2024

- Built a cryptocurrency and NFT wallet-monitoring application using JavaScript, web3.js, blockchain APIs, and Firebase.
- Added functionality to add and edit tracked wallet addresses and retrieve balances, token values, NFT holdings, and transaction activity.
- Sent Discord notifications when monitored wallets recorded transaction activity.

KalasagAI

Cybersecurity Chatbot | Python, NLP, Rasa, LLaMA 3.3, PHP, Supabase | Feb 2025

- Built an NLP chatbot that analyzes messages and URLs for phishing indicators using Python, Rasa, LLaMA 3.3, PHP, and Supabase.
- Integrated the VirusTotal API with a self-enriching domain-reputation database that caches newly seen domains to reduce lookup latency for repeat queries.

ADDITIONAL EXPERIENCE

InnOlympics 2026 Hackathon - KA'AYUDA

Prototype Development and Presentation | Apr 2026

- Built and presented a prototype during a two-day GDG on Campus PLM hackathon, contributing to prototype development, problem framing, and pitch preparation.

EDUCATION

FEU Institute of Technology | Manila, Philippines

Bachelor of Science in Computer Science, Specialization in Data Science | September 2026

CERTIFICATIONS

Information Technology Specialist - Python (2024) | Cisco Networking Academy - Introduction to Networks (2024) | PMI Project Management Ready (2025)
